

# RECRUITING RESEARCH PARTICIPANTS WITH HUNTINGTON'S DISEASE

## **Purpose of Study**

We know that keeping physically active is important for any person who has a chronic health condition. The purpose of this study is to explore the influence of physical activity on cognitive, motor and functional abilities over a one-year period. In this study, we will evaluate physical activity in people with HD using wearable activity monitors, and exercise tests.

**Physical ACTivity and Exercise  
outcomes in Huntington's  
Disease**

## **To participate in this study you must:**

- ✧ Have a positive gene test for Huntington's disease or a clinical diagnosis of HD in the early stages
- ✧ Be above the age of 18

## **Neurorehabilitation Research Lab**

Teacher's College, Columbia University
